This service may be provided by our Collaborative Partners and you shall be subject to the terms of these Collaborative Partners, We shall not be responsible for any incidental, direct, indirect, or consequential damages or losses that these third parties may cause to You. Further, as mentioned the sub-clause any transactions towards third-party individuals and/or groups are disallowed within the platform.
- Spot Trading We offer the Spot Trading service which is the process of buying and selling Virtual Assets at real-time prices with the aim of generating a trading profit.

Spot trading involves the immediate purchase and sale of digital assets at real-time market prices with the goal of generating trading profits.

Taking advantage of market price fluctuations, acquiring assets at lower prices and subsequently selling them at higher prices to secure financial gains.

Spot traders can maximize their financial returns, seize profitable opportunities, and enhance their trading outcomes by closely monitoring market conditions.

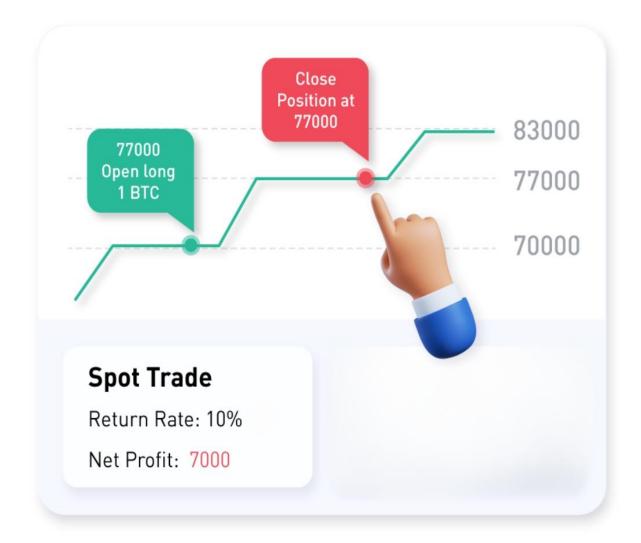

Buy low sell high

"Buy low, sell high" is a strategy used in spot trading where traders aim to purchase cryptocurrencies when their prices are relatively low.

They wait for the prices to increase and sell the assets at a higher price to make a profit.

This approach is based on the belief that assets will likely increase in value over time, allowing traders to capitalize on the price difference between their buying and selling points.

Buy Low Sell High
